Weekly Coal Production

Production for Week Ended:
January 10, 1987

Highlights

U.S. coal production in the week ended January 10, 1987, as estimated by the Energy Information Administration, totaled 17.1 million short tons (bituminous coal and lignite, 17.0 million short tons; Pennsylvania anthracite, .07 million short tons). This was 48 percent higher than in the previous week, and was 6.9 percent lower than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through January 10, 1987, was estimated at 21.7 million short tons, 10.2 percent below the 24.1 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.

NOTE: Year to date figures represent cumulative data from January 1 of each year to the end of comparable reporting weeks for those years. Thus, cumulative data will reflect differences in the number of work days occurring within comparable weeks for the respective years (e.g., the period January 1 through January 11, 1986, in this report includes one more work day than during January 1 through January 10, 1987). Work day differences tend to balance out as the year progresses.

Figure 1. Coal Production

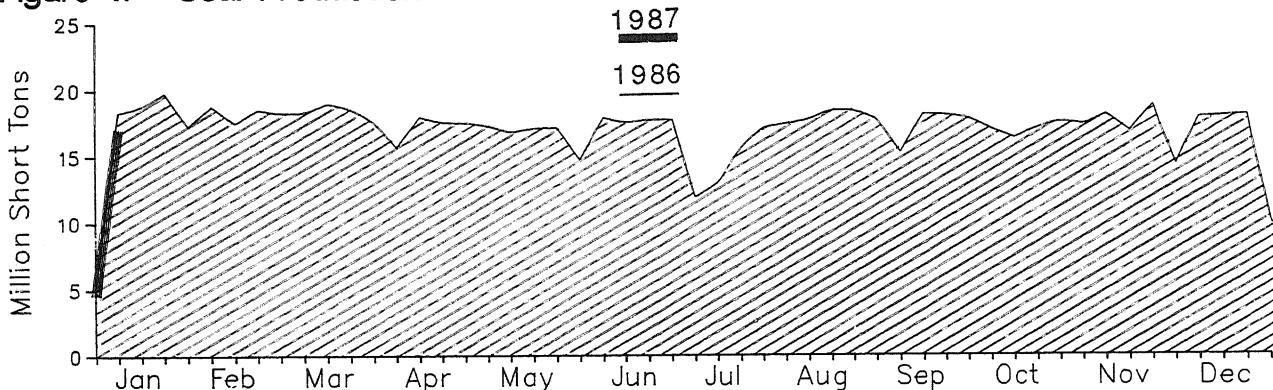

Table 1. Coal Production

Production and Carloadings	Week Ended			Year to Date		
	01/10/87	01/03/87	01/11/86	01/10/87	01/11/86	Percent Change
Production (Thousand Short Tons)						
Bituminous ¹ and Lignite	16,983	11,468	18,264	21,570	24,045	-10.3
Pennsylvania Anthracite	72	56	61	94	80	17.3
